Job Order
订单/生产单管理

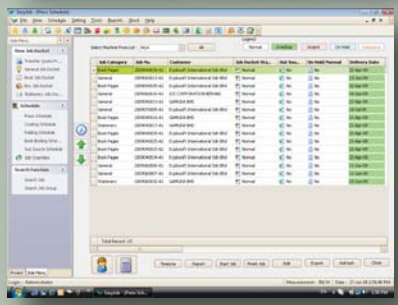

Transfer confirm quotation from EasyCost to new Job Docket or manual create job docket from EasyJob. Enable with flexible tools to change EasyCost's production ready method and suitable to use it on real production workflow scenario

Process Planning
生产程序管理

Allow the production planner to set/verify a job prior to actual production process.

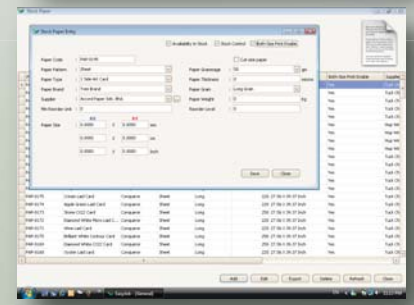

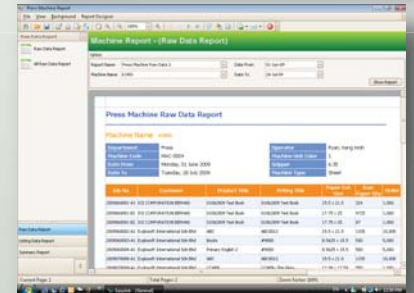

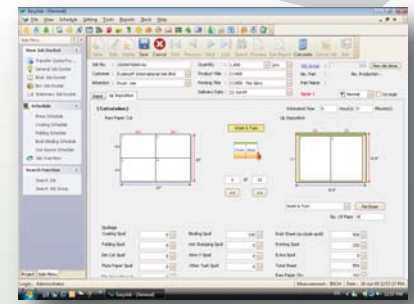

- Re-plan the job in terms of breaking the job into job parts and production section.
- Assign and schedule press machine(s) for the production
- Define due dates of work, for departments or outsource parties.
- Visually track on-going work in progress in real time at job part and production level.
- Immediately re-schedule any production, arising from say machine being down or new urgent jobs.
- Upon go-ahead approval by production planner, system will reserve material required to complete the job

Printing Module
印刷线管理

Being one of the key modules, the printing module allows:

- Tracking of time taken to complete each job
 - Tracking of job status
 - Tracking of spoilage
 - Tracking of printer down time or under maintenance.
- In conjunction with the use of bar code readers, work progress and effort can be easily tracked.

Stock Module
物流管理

- Comprehensive records on stock and movements
- includes bar code, item code, supplier code etc
- Power with search modes
- Standard stock management reports
- Stock control such as paper, ink, blanket, items etc
